

This Racer envelope is constructed from 16 gores providing a slim super-smooth shape with zero horizontal stress, the Cameron Racer slips quickly up and down through the sky providing the pilot with incredible atmospheric steering capabilities.

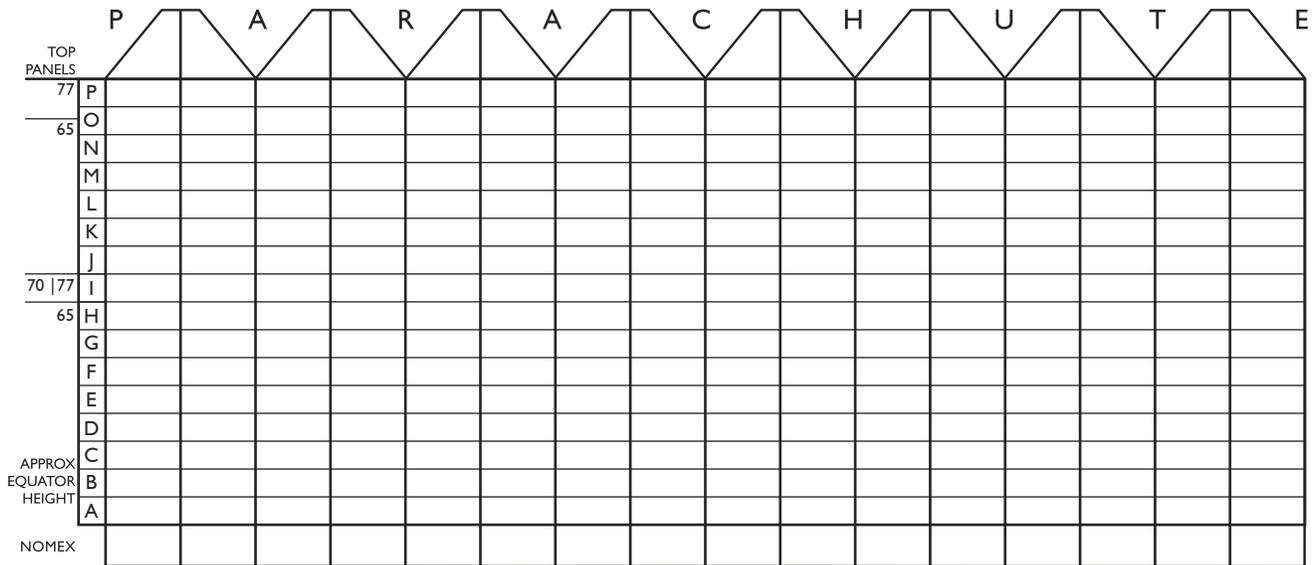

Available in three sizes - 65,70 and 77 - each gore is built-up from a number of nylon panels which are identified by letters. The row of panels around the base of the balloon, immediately above the fire resistant Nomex mouth panels, are 'A' panels. 'A' is followed by 'B' with the series continuing upward. The number of panels in each gore varies depending on envelope size and this can affect the colour scheme, especially for spiral and block designs.

The location of the equator is also affected by size and can significantly influence the positioning of any artwork.

A parachute top is standard. This is constructed from 16 panels that radiate from a centre patch. Fast deflation systems are optional.

There is no extra charge for changes of fabric colour at any of the lines shown on the chart is the colours are from the standard Cameron range.

Not to scale

MODEL	TR-65	TR-70	TR-77
MAX. PANEL WIDTH	2.87	2.93	3.04
PANEL DEPTH	1.43	1.43	1.43
